<p><b>EDUCATIONAL GOALS AND EXPECTED LEARNING OUTCOMES</b>          "Complements of Geometry" is an introductory course on fundamentals of the theory of plane algebraic curves defined over a field. A specific objective is to show the interaction between algebra and geometry. The course also serves for the students to improve their expository skills and get used to arguing rigorously in the proofs.</p>			
<p><b>PRE-REQUIREMENTS</b> Geometry I and Geometry II.</p>			
<p><b>SYLLABUS</b> Symmetric functions, Sylvester resultant, elimination theory, fundamentals on plane algebraic curves, intersection multiplicity, Bézout's theorem, linear branches, pencil of curves, Bertini's theorem, polar curves, Hessian curves, Plücker's formulas, plane cubics</p>
